Summary and Recommended Investment Strategy.

Our forecasting models remain Neutral, but we believe the economic situation and outlook is becoming "less worse". *Not-so-negative* investor sentiment could see share prices re-rated from *very depressed* sentiment lows.

Investment Outlook.

The current period of rising interest rates could be nearing an end.

Inflation is high, but has eased back in major markets. US Consumer Price Index inflation peaked at 9.1% in July 2022 and is now 4.9%. UK CPI peaked at 11.1% in November 2022 and is now 8.7%. German CPI peaked at 10.4% in November and has eased back to 6.1%.

Australian and NZ CPI have just ticked back slightly.

The next US **Federal Open Market Committee** meeting is scheduled for 13-14 June, with the market estimating a 75% chance that interest rates will remain unchanged (and a 25% chance they go up again).

Economic growth rates are low, but there is no real signs of the widely anticipated recession!

Stockmarkets, however, currently reflect a lot of negative expectations.

The best stockmarket performances do <u>not</u> occur when the economic outlook is *good* and *becoming better*, but when <u>the outlook is *bad* and becomes "*less worse*".</u>

When the outlook is bad, investor sentiment is that shares are "hopeless" and priced as if they were about to go bust (i.e. at perhaps 10-20 cents in the dollar).

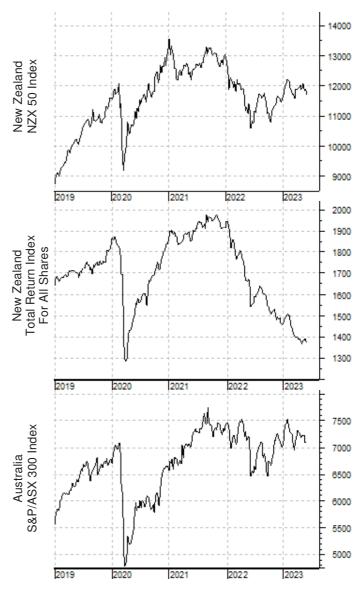

When things become "less worse" - perhaps as high inflation eases? or interest rates rise less rapidly? - investor sentiment improves to "there's a chance" and share prices can get re-rated to just "very undervalued" (i.e. perhaps 40-60 cents in the dollar).

That is a potential 3-4 fold re-rating in share prices off their depressed lows.

Of course, calling the ultimate lows of the stockmarket (or individual share prices) is extremely difficult, but perhaps this newsletter can suggest that the global economic situation and outlook is becoming *less worse* than it was six months or a year ago?

Stockmarket Forecasts

Australia: One-Month 49% (Neutral) 47% (Neutral)
New Zealand: 45% (Neutral) 33% (Bearish)

Recommended Investments

<u>CDL Investments</u> reports that its 254 hectare land holding is sufficient for around 3300 residential sections. As it expects to develop and sell about 200 sections per year, that will last 16½ years!

Most of that land is in Hamilton (49.0%) and Hawkes Bay (32.1%), with smaller holdings in Auckland (7.6%), Canterbury (6.7%) and Nelson (4.7%).

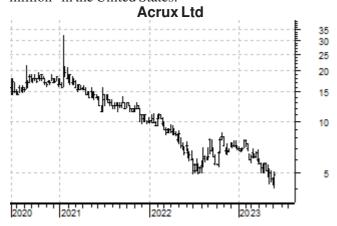

The company believes that in the current economic environment that vendors (of land for development) are "becoming more realistic with price expectations", plus some "highly leveraged vendors" is resulting in a rise in "distressed sales". CDL Investments has \$71.0 million in cash for land purchases and would "borrow or raise capital for the right opportunities".

Sales and margins for the first four months of 2023 have been "positive" but the company expects it will be "difficult" to maintain the profits of the last two years.

(This section is in Australian currency, unless stated.)

Acrux Ltd has - ten months after submitting its application - received US Food & Drug Administration approval to manufacture and market *Dapsone Gel 5%*, a generic version of *Aczone Gel 5%*. The branded product is used to treat acne, with annual sales "in excess of US\$17.5 million" in the United States.

ALS Limited has reported strong growth:

	Year to 31/3/202	3	
	Latest	Previous	Change
Revenues	\$2,421.2m	\$2,182.3m	+10.9%
Net Profit	\$320.6m	\$264.2m	+21.3%
Net Cash Surplus	\$439.9m	\$286.8m	+53.4%
Earningspershare	66.2c	54.6c	+21.2%
Dividends per share	39.7c	32.8c	+21.0%
			. 1.00

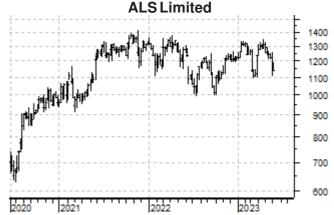

<u>Life Science</u> revenues were up 17.1% to \$1,334.1 million, with earnings (before interest and tax) up 6.2% at \$206.9 million.

<u>Commodities</u> revenues were up 22.6% at \$1,087.1 million with earnings up 29.3% at \$330.0 million.

The small <u>Asset Care</u> division was sold during the year.

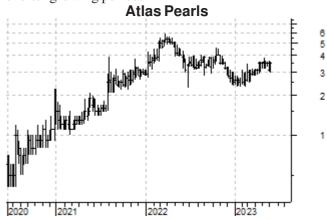

The company made ten acquisitions during the financial year. It acquired **HRL Holdings** (in New Zealand) in July 2022 for \$79.7 million, **Servicios de Ingeniera y Ambiente SAS** (Colombia) for \$14.0 million and **Reliance Clinical Testing Services** (USA) for \$17.2 million in November, **ALS Goldspot Discoveries** (Canada) in December for \$26.0 million and six other businesses for a total of \$51.4 million.

In the new financial year (i.e. in April and May) it has purchased **ASR Laboratorios Group** (in Brazil) for \$13.5 million, **Hidro Lab** (Croatia) for \$3.1 million and **Analytical Solutions Group** (India) for \$28.0 million.

<u>Atlas Pearls</u> reports "sales buoyed by continued strong global demand for South Sea Pearls". A final physical and online auction for the financial year will be held in June.

Genetic samples from 1750 brood stock from North Bali and another 1750 from Lembata will be sent to **GenomNZ** for DNA sequencing, with the results sent to the **Norwegian Institute of Food, Fisheries and Aquaculture Research** who will "provide a breeding matrix for future production spawns and establishment of a founder population". Genetic breeding *could* potentially produce larger, higher quality pearls over a shorter growing period.

Anteris Technologies has successfully implanted its *DurAVR* in a third group of seven patients (and one "compassionate case" patient with comorbidities) achieving "100% procedural success with no device-related complications". This has been designed to "define device imitations", verify design improvements and "increase clinical experience" ahead of the FDA approved *Early Feasibility Study*. This makes a total of 21 patients treated to date.

The first two groups (from November 2021 and May 2022) have "excellent results maintained over one year" and "restoration of near-normal blood flow dynamics".

The **United States Patent and Trademark Office** has issued another utility patent, providing protection through to September 2038.

Anteris Technologies is also working to develop a *NextGen DurAVR* which can be injection molded from

a "novel protein and polyurethane/Glycerol scaffold". Potentially that could be stronger (as it is not stitched together) and quicker and cheaper to manufacture!

The average Total Return (i.e. both Capital Gains/Losses plus Dividends received) of all current investments from initial recommendation is +271.2%. This is equal to an average annual rate of +20.7%, based upon the length of time each position has been held.

The average annual rate of gain of ALL recommendations (both the 36 current and 179 closed out) is +27.5%, compared with a market gain of +2.7% (by the SRC Total Return Index).

CURRENT ADVICE is either Buy, Hold+, Hold+, Hold+ indicates the most attractive shares not rated as Buy. Hold- indicates relatively less attractive issues. * Initial Recommendation Prices adjusted for Share Splits, Bonus and Cash Issues.

(1) Ardea Resources' return includes 1/4 share of Kalgoorlie Gold (KAL) worth 3.0 cents and Reckon Ltd includes 1/3 share of GetBusy plc (GETB) worth 65.0 pence (121.3 Aust cents). (2) Iluka Resources includes one share of Deterra Royalties.

Recommended Investments

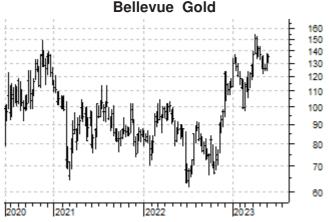

Page 4

(Continued from Page 3)

Bellevue Gold has signed a binding *Power Purchase Agreement* with Zenith Energy Operations who will finance, build, own, operate and maintain the 88MW power station for an initial term of 15 years. Bellevue Gold has commenced construction of earthworks and concrete foundations and critical long lead items which will now be acquired by Zenith. 80% of the power is expected from solar and wind (and battery), with LNG generator backup.

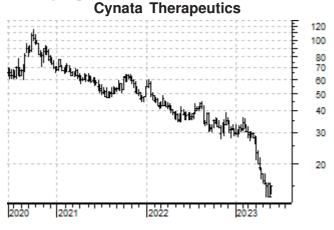

Bellevue Gold has also signed a refining agreement with **ABC Refinery** (**Australia**) for its gold to be refined separately which it will then market as "green" (i.e. low CO₂ emission) Gold and "receive a premium price for its gold".

The company has also received the final permits - for the *Tailing Facility* and *Water Storage* - required for commissioning and full operation of the mine. First Gold is expected in the December quarter this year.

Cynata Therapeutics has reported an "encouraging" 60% (i.e. nine of 15) survival rate after two years from patients in its Phase I acute GvHD trial.

In comparison, a Phase III Clinical study for *Ruxolitinib* - approved by the **FDA** to treat aGvHD in 2019 - reported an 18 month survival rate (two year data is not available) of only 38%, compared with 36% for its control group.

<u>Energy Transition Minerals</u> reports that the Government of Greenland has formally rejected its application for an exploitation (i.e. mining) licence, on the basis of Act 20.

The Government, however, "expressly states" this is

not a decision on the amended application of 16 December 2022 (where the Uranium would not be extracted but left in the tailings). This "will be the subject of a separate decision".

The Arbitration begins on 19 July, The company has spent 15 years and "more than \$130 million to progress the *Kvanefjeld* project to be development ready".

Elixir Energy will expand the *Nomgon Pilot Project* flow period and drill an additional Pilot well. The market interpreted that very negatively and the share price fell sharply.

This, however, is the first exploration and drilling in the region, so Elixir Energy has no historical information and must drill all of its own wells. <u>In video interviews</u> (released on the internet) the directors further disclose that they now believe *Nomgon-8* and *Nomgon-9* are on different sides of a fault in the coal seam.

To further explore this situation, *Nomgon-8* will remain closed and used to measure "interference pressure". The *Nomgon-10* pilot well will be drilled on the same side of the coal fault as *Nomgon-9* and provide additional data that will be used to plan the commercialisation.

Water flow rates remain low (which is a favourable sign, indicating the coal is over-saturated with gas) and the company will use smaller pumps (which would lower the cost of commercialisation), placed *below the level of the coal seam* to further lower water levels.

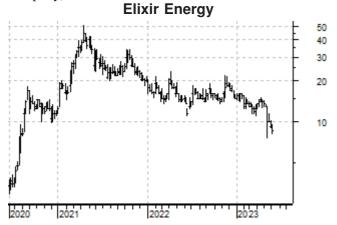

The directors are "pretty confident of an economic pilot"-helped by low drilling costs in Mongolia and high gas prices in that part of the world-with commercialisation likely in less that two years . . . but first they need to collect more data.

Elixir Energy also has excellent funding news for its Daydream-2 appraisal well planned for later this year. The company will test "enhanced stimulation techniques" based on the company's "proprietary Mechanical Earth Model and Reservoir/Frac Model" which "suggest the potential to improve the [gas] flowrates significantly".

The Australian Government has provided an "Advanced Finding" that all "activities associated with the *Daydream-2* project will qualify as eligible R&D Activities for the purpose of the R&D Tax Incentive". In other words, the Federal Government will refund 43.5% of all costs associated with this exploration well and the "innovative technologies" being tested.

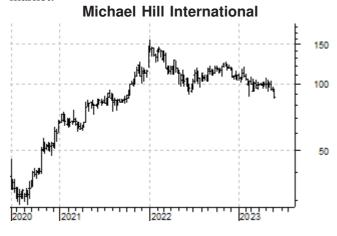

Based on that finding, Elixir Resources will be able to source up-front "non-recourse project financing" from third party lenders who will be repaid later from the R&D Tax Incentive refund.

Elixir Energy does *not* need any further funding partner for this exploration well, but would consider taking on a partner that could offer marketing and/or offtake agreements (e.g. a Japanese gas trading company).

<u>Michael Hill International</u> has completed the acquisition of **Bevilles Jewellers**, with "initial steps for the store rollout growth strategy progressing well".

The company also reports sales for the first four months of the second half of the year are down 3.5% - which is better than industry data suggesting a "double-digit decline in sales for the total Australian retail jewellery market.

St Barbara has received slightly improved offers for its *Leonora* assets. In response to offers from Silver Lake Resources, Genesis Minerals has increased its offer to \$370 million in cash (unchanged), plus 205.0 million Genesis Minerals shares (up from 200.0 million shares, although only 147.8 million shares were to be issued immediately plus 52.2 million shares in deferred consideration in several years time when Tower Hill achieves first production).

Silver Lake Resources then improved its offer to \$370 million in cash (up from \$326 million) plus 327.1 million Silver Lake shares.

At current market values, those offers are worth \$636.5 million and \$711.8 million, respectively.

St Barbara also reports that the Reclamation Security

Bond for the *Touquoy Mine* is likely to increase from C\$41 million to C\$80 million.

<u>Vulcan Energy</u> has installed a crystalliser developed by **Novopro** in its *Lithium Extraction Optimisation Plant*.

Vulcan Energy and **Stellantis** have advanced the proposed geothermal heating project for the Stellantis manufacturing facility at Russelsheim (that we discussed in February), signing "a binding term sheet for the first phase of a multiphase project". Vulcan Energy will undertake a *Pre-Feasibility Study* for the geothermal project (and assess the potential for Lithium production) to be completed by October 2023. Stellantis will "aim to source funding for 50% of the project development" and "both parties will seek *public funding*" (i.e. grants, loans and/or loan guarantees) for the project which will be 50% owned by each partner.

Vulcan Energy expects that its main Phase I Lithum development project will be granted *Strategic Project* status under the **Critical Raw Materials Act** and *Net Zero Resilience Project* status under the **Net Zero Industry Act**. This would "fast track and streamline" environmental impact assessments (where regulators can "not exceed a period of 30 days" to process a submission) and project permitting (i.e. processing "shall not exceed 24 months" for a *Strategic Project* or 12 months for a *Net Zero Resilience Project*).

Strategic Projects can receive public funding in the form of guarantees, loans, equity and quasi-equity investments) while Net Zero Projects can receive loan guarantees, off-take guarantees and grants from the Innovation Fund.

There were three *insider* buys in Vulcan Energy shares last week: Non-Executive Director J Bush purchased 8170 shares at \$3.65 to lift her holding to 21,868 shares and Non-Executive Director M Skelton purchased 1000 shares at \$3.70. That is a small \$3,700 trade (that we would normally ignore) but lifted his holding 100% to 2000 shares. The Non-Executive Chairman G Rezos purchased 36,773 shares on-market at around \$3.70 which, together with the conversion of 1,000,000 Performance Rights, lifts his holding to 8,635,500 shares (5.2% of the company and worth about \$31 million).

The Managing Director and Chief Executive D Wedin also has a large 16,458,561 share (9.8% of the company and worth \$59 million) investment in the company.

Page 6 Market Analysis

Share Recommendation: SELL Copper Mountain

SELL Copper Mountain (code C6C).

We recommend selling Copper Mountain shares on the ASX market this week.

On Monday 13 June, Copper Mountain shareholders vote on the merger with **Hudbay Minerals Inc** and (when the merger is approved) Copper Mountain shares will be <u>suspended from trading on the ASX from the close</u> of business on 16 June.

Remaining Copper Mountain shareholders will receive 0.381 Hudbay Minerals shares for every Copper Mountain share. <u>Hudbay Minerals will not be listed on the ASX</u>, but trade only in Canada and the United States. We believe this poses serious administrative problems (and at the very least, higher costs) for most shareholders, so it is better to sell now.

Which broker you use and how your shares are registered could determine how much "problem" you face with this merger that would give you Canadian and US listed shares. Your broker may or may not be able to trade in Canadian or US listed shares.

Even if they do, brokerage (and minimum fees) are often 2-4 times higher than an ASX trade. Most brokers also charge usurious and undisclosed forex margins (when you sell and want to convert the CAD or USD back to NZD or AUD). NZ brokers also charge \$60-250 per year for a nominee account to hold foreign shares.

If your Copper Mountain shares are registered in a broker nominee, then the Hudbay Minerals shares will

also be in the broker nominee account and *if* your broker offers the services above then you may be able to hold and eventually sell these shares through your broker.

If your Copper Mountain shares are registered in your name under CHESS, then you will probably end up with a Hudbay Minerals share certificate. Even if your broker offers trading in Canada and the US, they probably can't sell certificated shares and they probably can't even transfer certificated shares to their nominee.

So your Hudbay Minerals shares could be effectively "stranded" with no way to sell them.

Therefore we are recommending the sale of these shares this week, ahead of the ASX delisting and the merger with Hudbay Minerals.

Company Analysis: Euro Manganese

Euro Manganese Inc. (code EMN).

Euro Manganese is a Canadian company listed on the Toronto TSX Venture, ASX (where most actively traded), US OTC and Frankfurt stock exchanges. The firm's "first step in building a multi-asset manganese company" is the *Chvaletice Manganese Project* in the Czech Republic. This is a late stage, potentially very profitable project to reprocess 27Mt (@ 7.4% Manganese) of mine tailings over 25 years to produce high-value, high purity electrolyte Manganese metal (HPEMM) and high purity Manganese Sulphate Monohydrate (HPMSM) for the European EV and renewable battery markets.

The Chvaletice Manganese Project

The *Chvaletice* mine produced Manganese ore from 1915 until 1945, with the focus then switching to Pyrite (for the production of Sulphuric Acid) from 1951 to 1975 with this latter period resulting in the three Manganeserich tailing deposits that Euro Manganese now seeks to reprocess.

Interest in reprocessing these tailings began in 1986 and Euro Manganese acquired the project in 2016, conducting tests, including operating a semi-continuous pilot plant. A demonstration plant was built in late 2022, with first HPEMM produced in April 2023.

The demonstration plant will operate for at least three

years, providing HPEMM and HPMSM samples to multiple offtake partners (i.e. probably 30-40 European EV and battery firms), training staff ahead of commissioning the full scale production facility and then testing potential third-party feedstock for the commercial plant.

The *Final Investment Decision* for the project is expected in early 2024, with first commercial production in 2027.

Environmental and Economic Benefits

The project has both financial and environmental benefits. The current tailings dump is unlined and manganese and other elements can leach into the environment. Euro Manganese will remove the manganese and return the new tailing to a lined facility on the same site, effectively remediating the site to modern environmental standards over the next 25 years.

The company's Manganese products (produced with hydro-electricity) will have a CO_2 footprint 60% lower than Chinese products. The processing plant will be built adjacent to the tailings, so there is very little transportation and processing will re-use waste water from a nearby power plant.

No toxic selenium or fluorine will be used, unlike other Manganese production.

When in operation the project will create around 400 jobs and pay US\$1,500 million in royalties and taxes to the Czech Republic government over the next 25 years.

The Chvaletice Manganese Project Feasibility Study

The July 2022 *Feasibility Study* estimates a US\$757 million capital cost to develop this project, with a Net Present Value (at 8%) of US\$1,340 million (or A\$2,060 million or 511 cents per share) and an after-tax Internal Rate of Return of 21.9%. This will produce around 48,800 tonnes of HPEMM annually for 25 years, of which about 70% will be converted to HPMSM.

65% of this capital cost will likely be raised as debt. The 35% equity investment *could* come from project level investment (i.e. by an OEM or EV focused financial fund), placements of new shares (at a "re-rated share price") or a cash issue to all shareholders.

The European Bank for Reconstruction and Development (EBRD) is a major shareholder with 17.8 million shares (4.4% of the company), acquired through a strategic placement at C\$0.4775 per share in February 2022. EBRD is also "interested in being a debt provider" and probably also increasing its equity investment.

The *Chvaletice Manganese Project* will be the "only primary producer of manganese products for the battery industry within the EU, making it of significant potential strategic importance in the creation of a European battery raw material supply chain".

The European Critical Raw Materials Act identifies "Manganese - Battery Grade" as a critical raw material and the *Chvaletice Manganese Project* meets the criteria of a "Strategic Project". This would "support access to funding" from the European Investment Bank, EBRD (which has already indicated its interest in providing debt financing), private institutions, Member States programs and European Union funding and financing programs (e.g. government agencies guaranteeing 90-100% of loans made by banks to approved projects).

The European Commission has "adapted State Aid rules to allow flexibility for Member States to grant aid for the production of critical raw materials related to key net-zero technologies".

Renewable electricity will account for about 38% of total operating costs and reagents about another 30%. Longer term the company could reduce reagent costs by building its own Sulphuric Acid plant (which could also provide some of its electricity).

The Becancour Project

Euro Manganese is conducting a *Scoping Study* to evaluate exporting some of the HPEMM produced to a site in Becancour, Quebec, Canada to produce HPMSM for the North American markets. It has an option to purchase a 15 hectare site for C\$9.2 million.

This would (1) provide "additional margin" on HPEMM not processed to HPSMS in Europe, (2) the proposed site is "strategically located between two cathode plants" so could provide HPMSM solution (as required by the customers), saving the energy cost of evaporation and crystalisation for transport, (3) "Quebec offers attractive government financial support programs, that may provide incentives for the construction of the plant" and (4) the HPMSM would qualify as "locally produced" in Canada and the United States.

This would be a relatively low capital cost project

consisting of only (1) dissolving HPEMM in Sulphuric Acid (and pumping the solution to neighbouring battery companies) and (2) evapourating water to produce crystallised HPMSM for road or rail transport to more distant customers.

Investment Criteria

While this is a Canadian company, about two-thirds of the shares are held in Australia as "CHESS Depositary Interests", which trade on the ASX under the code EMN. The Australian stockmarket accounts for about 80% of the volume of shares traded, with about 20% in Canada (and with little trading in the US or Germany).

The company currently has no revenues or profits. At 31 March it held C\$13.8 million (3.8 Aust cents per share) in cash at the bank and was debt-free.

The issued capital consists of 402,669,227 ordinary shares, which at 18½ cents gives a market capitalisation of just A\$74.5 million. That is a very low valuation for a company with a very large, financially attractive project.

The shares are *neglected* by brokers and institutions. The directors have reasonable shareholdings in Euro Manganese. The Non-Executive Chairman owns 1,430,218 shares and four other Non-Executive Directors hold 1,218,888 shares, 1,098,409 shares, 40,000 shares and 35,000 shares. The CEO has only 31,500 shares (but 13.1 million executive options).

There have been six *insider* Buys over the last year (and no sells). There were five buys in August 2022 and one in September 2022. Prices were around A\$0.35-0.38 and C\$0.33-0.35.

The Relative Strength Rating is -18.8%, ranked 79 (on a scale of 0-99) as the shares have lost around 50% of their value over the last six months and 75% over the last couple of years. This late-stage project is progressing well but the shares just keep getting cheaper!

Summary and Recommendation

Euro Manganese has "excellent ESG credentials" (which should ensure funding) but it is also extremely undervalued! *Mr Market* values this company at just A\$75 million yet it is seeking to build a project worth a net A\$2060 million (i.e. A\$2060 million *more* than the upfront development cost).

The project also has excellent economics, offering a 21.9% after tax return on capital invested, with two-thirds of that likely to be debt funded at much lower interest costs (i.e. offering a significantly higher leveraged return on equity required to fund the project).

This is another higher risk but potential multi-bagger investment which justifies a small (i.e. less than 1%) investment in our portfolio.

Computer Selections of Australian Shares based upon our Comprehensive Share Selection Criteria

For an explanation of this table see the Share Selection Methods report available from our website. These shares are not formal "buy" and "sell" recommendations, but the "Under-Valued", "Best Performing" and "Income" shares should be considered for purchase, while the "Over-Valued" and "Worst

Performing"	shares	can g	gener	ally	be s	old	to re	lease	mo	ney	for 1	e-in	vestmer	nt in 1	more attractive	shares	3.	or pur			, ,,,,,	,	, 0		,			., 0150

Page 13

Performance Forecasts" are computer generated predictions of the relative future price performance of a company's shares over the next three to six months. Performance Forecasts are calculated for every listed NZ share (except Investment Trusts) on a rating scale using the letters "A" (Highest potential for capital appreciation over the next 3-6 months), "B" (Above Average), "C" (Average), "D" (Below Average) and "E" (Lowest). These predictions are NOT buy or sell recommendations, but can be useful to help time planned purchases or sales, or to identify shares worthy of further study and analysis.

The next issue of *Market Analysis* will be emailed in four weeks time on <u>Monday July 10, 2023</u>.

The print version will be delivered later that week, depending upon printing and postal delivery times.

MARKET ANALYSIS is published 12 times per year by Securities Research, 3/47 Boyce Ave, Mt Roskill, Auckland. Subscribe online at www.stockmarket.co.nz or email james@stockmarket.co.nz.

Nothing in this newsletter is intended to be investment advice. Securities Research is not a registered investment advisor or broker/dealer. This newsletter is published for general informational, educational and entertainment purposes only, for readers wishing to follow the personal stockmarket experiences and current share investments of James Cornell (and family investment entities). Starting in 1971 with very little capital, James built significant investment wealth in half a lifetime and has compounded that further since "retiring" in 2006 to a more tax friendly jurisdiction. As the investment goals of readers may differ, please do your own research or seek professional advice appropriate to your investment goals and personal circumstances before making any investment decision.
